

Logwin is awarded environmental certificate for air and sea freight locations

Grevenmacher (Luxembourg) – Certified environmental standards: The logistics service provider [Logwin](#) has had all 20 of its [air and sea freight locations](#) in Germany and Austria certified in accordance with DIN EN ISO 14001. The ISO standard is an internationally recognised seal of approval for environmental management systems. Certification partner SVG Zertifizierungsdienst GmbH presented the certificate documents on April 25. The environmental certificate is valid for three years.

The audit completed by Logwin shows how it has firmly anchored [sustainable environmental and climate protection](#) in all its processes and services. Customers thus benefit from transport and logistics services which are efficient and highly environmentally friendly. Logwin is steadily expanding its environmental management system in order to continuously improve environmental protection – additional national companies will also have their locations certified in accordance with DIN EN ISO 14001.

Exact process analysis

Logwin carefully prepared for ISO certification in Germany and Austria. The company started analysing its processes, facilities, vehicles and equipment with regard to environmental relevance back in the summer of 2013. The environmental audit covers consumption data for power, water, waste water, fuel and paper together with the amounts of paper and other waste disposed and pollutants emitted. Logwin used the data as the basis for developing targets and defining measures aimed at achieving these targets. For example, the installation of LED lighting reduces electricity consumption, electronic forwarding documents save paper and intensive driver training cuts fuel consumption. All the measures introduced conserve precious resources and are at the same time economically beneficial.

Customer-related carbon footprint

Logwin is currently improving its customer-related carbon footprint for shipments. It allows customers to determine CO₂ emissions for each shipment from consignor to consignee. In the future it will be possible to retrieve this data automatically at the press of a button. The system thus provides customers with

maximum transparency with regard to climate and environmental compatibility in a quick and simple manner.

About Logwin AG

Logwin AG (Grevenmacher, Luxembourg) provides efficient logistics and transport solutions for its customers from industry and retailing. In 2013 the group generated sales of 1.2 billion euros and currently employs approximately 4,300 staff. Logwin operates in all main markets worldwide and has over 200 locations on six continents.
